FRONT "The Grand Canyon in Winter White"
COVER: DICK DIETRICH

ARIZONA
WINDOW OF THE SOUTHWEST

At its greatest length, Arizona is 391 miles long; east and west, at its greatest width, and is 337 miles wide. Its elevations vary from 137 feet above sea level, near the Mexican border southwest of Yuma, to its highest peak, Humphrey's Peak in the San Francisco range near Flagstaff, which has an elevation of 12,611 feet. The state has three general geographical regions: typical desert region in the southwestern part; a narrow, forested mountain region in the center; a high wind-swept plateau region in the northwest.

Such a variety of elevations accounts for the variety of climates to which Arizonans are subjected. Rainfall varies from five to seven inches annually in the desert regions of the state and to twenty or more inches in the high country. In the arid or desert regions of the state, temperatures soar to 110 degrees or more in summer, but very seldom even approach freezing weather in winter. Cool summers are prevalent in the mountains, with heavy snowfall and freezing temperatures in winter. The plateau region of the northeast, which can swelter in summer temperatures of 110 degrees or better, also experiences freezing winter

weather, and at times severe storms. Such are the contrasts in weather and elevations in Arizona that one could go skiing on such mountains as Bill Williams, San Francisco Peaks and Mt. Lemmon some morning of a frigid winter day and on the afternoon of that same day be basking in the sun around a swimming pool in lower desert country just a few hours away.

Arizona, west of the Continental Divide, is within the Colorado drainage basin. Principal rivers of the state are the Colorado, Gila, Salt, Little Colorado, San Pedro, Santa Cruz, Verde, the Bill Williams and the Hassayampa.

Plant and animal life in the state is as varied as its temperatures and elevations. One finds everything from cactus, the palo verde, mesquite and catclaw in the desert to the extensive ponderosa pine forest of the central mountain region, the largest standing ponderosa pine forest in the United States.

With the varieties stated above, is it any wonder that Arizona should not be called the "Window of the Southwest."
